

## **Reflection**

### **My Contributions:**

I developed the Report module, business rules, and ERD.

I created wireframes of the report section of the app.

I assisted in establishing and organizing the team's collaborative GitHub repository.

I was involved in defining my subsystem's data needs.

### **What I've Learned:**

I came to know how to represent derived relationships in ERDs, especially where foreign keys are not directly used.

I had a better insight into the process of developing reports using task information.

I honed my skill in utilizing wireframing software and converting designs into technical specifications.

I gained knowledge on how to utilize GitHub from the perspective of a team development environment.

### **Challenges I Faced**

I fell ill at the critical stages of the project and could not keep pace.

My lack of attendance at various meetings and updates caused delays and dissatisfaction among the group members.

It was difficult for me to coordinate with team members due to various schedules. I felt a bit unclear as to task duties, which impacted overall productivity.
